The landing page

The screenshot shows the Web of Science landing page. The top navigation bar includes the Clarivate logo, the 'Web of Science' brand name, and links for 'Search', 'Marked List', 'History', and 'Alerts'. On the right side of the navigation bar, there are buttons for 'English' (with a dropdown arrow) and 'Products' (with a grid icon). Below the navigation bar, a large purple banner contains the text 'Discover multidisciplinary content from the world's most trusted global citation database.' Below the banner is a search bar with a dropdown menu set to 'Web of Science Core Collection' and 'Editions: All'. Below the search bar are tabs for 'DOCUMENTS', 'AUTHORS', 'CITED REFERENCES', and 'STRUCTURE'. The 'DOCUMENTS' tab is active. Below the tabs is a search input field with a dropdown menu set to 'All Fields' and a search box containing the text 'Example: liver disease india singh'. Below the search box are buttons for '+ Add row' and '+ Add date range', followed by the text 'Advanced Search'. At the bottom right of the search area are buttons for 'X Clear' and 'Search'. On the right side of the page, a 'Products' dropdown menu is open, listing various services: 'Web of Science', 'Web of Science (Classic)', 'Master Journal List', 'Publons', 'InCites Benchmarking & Analytics', 'Journal Citation Reports™', 'Essential Science Indicators', 'Reference Manager', 'EndNote', and 'EndNote Click'. A green arrow points to 'Web of Science (Classic)' in the dropdown menu.

Descriptions of Open Access Types in the Web of Science

Open access status is provided across the Web of Science platform as a result of a partnership with OurResearch, a not-for-profit organization.

This partnership improves discoverability and access to article-level OA versions not only by adding more links to OA content, but also by prioritizing the links to the best version of OA content when multiple versions of an article are available.

Open Access Type	Descriptions
Gold	<ul style="list-style-type: none"> Identified as having a Creative Commons (CC) license by OurResearch Unpaywall Database. All articles in these journals must have a license in accordance with the Budapest Open Access Initiative to be called Gold.
	<ul style="list-style-type: none"> Items identified as having a Creative Commons (CC) license by OurResearch but that are not in journals where all content is Gold. Hybrid Gold open access status is at varying levels of completeness, especially for newly published articles.
Free to Read	<p>The licensing for these articles is either unclear or identified by OurResearch as non-CC license articles. These are free-to-read or public access articles located on a publisher's site.</p> <p>A publisher may, as a promotion, grant free access to an article for a limited time. At the end of the promotional period, access to the article may require a fee which can lead to temporary errors in our data. You may find content that is incomplete, especially new content.</p>
Green	<ul style="list-style-type: none"> Final published versions of articles hosted on an institutional or subject-based repository (e.g., an article out of its embargo period posted to PubMed Central).
	<ul style="list-style-type: none"> Accepted manuscripts hosted on a repository. Content is peer reviewed and final, but may not have been through the publisher's copy-editing or typesetting.
	<ul style="list-style-type: none"> Original manuscripts submitted for publication, but that have not been through a peer review process.

Reviewer Report

2020/11/15

Content: The authors did a great job attempting to address several areas for growth in a short amount of time, including conducting a complete systematic literature review and meta-analysis. The biggest concerns I have for the paper are two-fold: (1) There is an exceedingly high level of heterogeneity suggesting that it is inappropriate to conduct a meta-analysis, yet no attempt to address such a high I2 value was undertaken. Subset analyses should be undertaken, or a median and IQR value should be reported rather than the meta-analysis value. Sub-analyses I would recommend include: (A) Separate based on country of origin (B) Exclude those with missing information on sex. (2) It is unclear why a systematic literature review and meta-analysis was included for what was submitted as a letter to the editorial. Typically, papers of this level of rigour are considered as original research articles.

ADVANCED SCIENCE

Volume: 3 Issue: 3

Article Number: 1500213

DOI: 10.1002/adv.201500213

Published: MAR 2016

Document Type: Article

Abstract

Lithium metal batteries (LMBs) are among the most promising candidates of high-energy-density devices for advanced energy storage. However, the growth of dendrites greatly hinders the practical applications of LMBs in portable electronics and electric vehicles. Constructing stable and efficient solid electrolyte interphase (SEI) is among the most effective strategies to inhibit the dendrite growth and thus to achieve a superior cycling performance. In this review, the mechanisms of SEI formation and models of SEI structure are briefly summarized. The analysis methods to probe the surface chemistry, morphology, electrochemical property, dynamic characteristics of SEI layer are emphasized. The critical factors affecting the SEI formation, such as electrolyte component, temperature, current density, are comprehensively debated. The efficient methods to modify SEI layer with the introduction of electrolyte system and additives, ex-situ-formed protective layer, as well as electrode design, are summarized. Although these works afford new insights into SEI research, robust and precise routes for SEI modification with well-designed structure, as well as understanding of the connection between SEI structure and electrochemical performance, is still inadequate. A multidisciplinary approach is highly required to enable the formation of robust SEI for highly efficient energy storage systems.

- Website:** www.rsc.org/csr

The article text includes an introduction section:

1. Introduction

Our society has been in transition from a fossil fuel based economy to a clean energy economy. This gradual but inevitable process is being accelerated by recent active research worldwide on sustainable energy harvesting, conversion and storage. Batteries have long been recognized for their capacity to efficiently convert and store electrical energy.^{1–10} They now find use in a myriad of applications extending from portable electronic devices, grid-scale energy storage to electric vehicles. Of the many different types of batteries marketed so far, lithium-ion technology has dominated the consumer market since its advent by virtue of its high specific energy and power density.^{1–10}

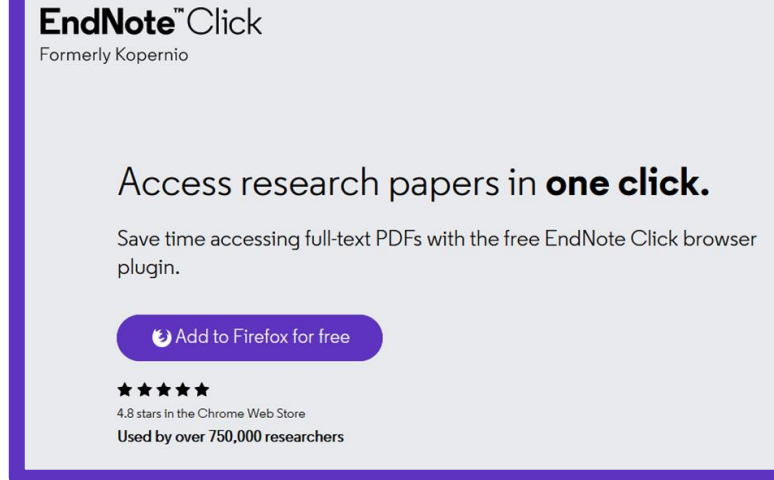

In the last five years or so, there has been a strong global incentive to develop electric vehicles (EVs) – starting from hybrid EVs to plug-in EVs and ultimately to pure EVs – powered by state-of-the-art lithium-ion batteries, as a means to reduce

Document Type: Review

Abstract

In this work, an overview regarding electric vehicle technologies and associated charging mechanisms is carried out. The review covers a broad range of topics related to electric vehicles, such as the basic types of electric vehicles, various factors affecting to increase the number of electric vehicle charging mechanisms, the major difference between these types of vehicles is that for the last two types, the battery can be externally recharged. In addition, FEVs operate only on battery charge and therefore always employ the charge depleting mode of operation requiring high power, high energy battery packs. On the other hand, PHEVs offer the possibility of being recharged by an internal combustion engine. In gasoline vehicles, the w

ARTHRITIS CARE & RESEARCH
Volume: 64 Issue: 4 Page: 465-474
DOI: 10.1002/acr.21596
Published: APR 2012
Document Type: Article

Abstract
Objective To update the American College of Rheumatology (ACR) 2000 recommendations for hip and knee osteoarthritis (OA) and develop new recommendations for hand OA.

Methods. A list of pharmacologic and nonpharmacologic modalities commonly used to manage knee, hip, and hand OA as well as clinical scenarios representing patients with symptomatic hand, hip, and knee OA were generated. Systematic evidence-based literature reviews were conducted by a working group at the Institute of Population Health, University of Ottawa, and updated by ACR staff to include additions to bibliographic databases through December 31, 2010. The Grading of Recommendations Assessment, Development and Evaluation approach, a formal process to rate scientific evidence and to develop recommendations that are as evidence based as possible, was used by a Technical Expert Panel comprised of various stakeholders to formulate the recommendations for the use of nonpharmacologic and pharmacologic modalities for OA of the hand, hip, and knee.

Results. Both "strong" and "conditional" recommendations were made for OA management. Modalities conditionally recommended for the management of hand OA include instruction in joint protection techniques, provision of assistive devices, use of thermal modalities and

4 classifications

4 sections (expandable)

Distance between dots mirrors distance in body of article. Dots that are physically closer to each other are more related.

Sections hint at the author's intent (introduction = key paper, materials = how to structure experiment, etc).

Clarivate evaluates author's exact wording in the sentences surrounding the mention to understand context. The mentions are classified as follows:

- Background: previously published research that orients the current study within a scholarly area.
- Basis: references that report the data sets, methods, concepts and ideas that the author is using for her work directly or on which the author bases her work.
- Compare: references that the current study's results can be compared to.
- Discuss: references mentioned because the current study is going into a more detailed discussion.

Document Type: Article

Abstract

Background Since December, 2019, Wuhan, China, has experienced an outbreak of coronavirus disease 2019 (COVID-19), caused by the severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2). Epidemiological and clinical characteristics of patients, risk factors for mortality and a detailed clinical course of illness, including viral shedding, have not been fully described.

A new panoramic view of articles that have been indexed in multiple collections was introduced. This view can be seen in All Databases for articles that have been indexed in two or more of the following collections: Web of Science Core Collection, Medline, and Biosis Citation Index, CABI, FSTA and Zoological Records. The additional category and classification data appears for entitled users only. More collections to be added in coming releases!

Additional refine options on the left so that you can identify articles from your search results that have been classified using these high-value classification systems.

Why do we find more results when we search all databases?

Example of the same article indexed in 3 different databases

All 3 records are linked in the Web of Science

When I search for example "coronavirus" in all databases, I will also find Core collection records that do not have the word "coronavirus"

Web of Science Core Collection

Chemical Data:

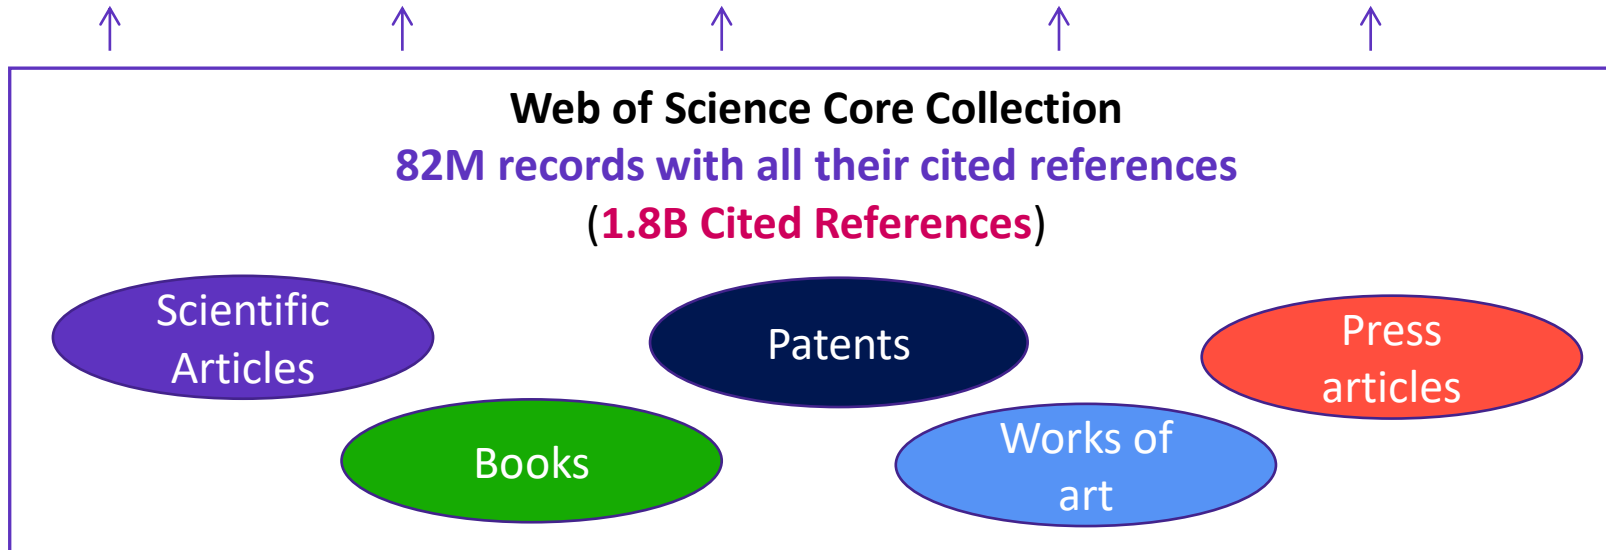

Watch this video where we explain why more results are found when searching all the database (instead of searching separately in each of them)

- If I search in only one database – for example Medline – then I will find results only in this database
- If I search all databases at once, then I will be able to find more results in each of them (although the searched terms are in the article indexed in one database, I will find this same article in the other databases)

Why searching cited references?

From 1900 for Science & Social Sciences Citation Indexes 2021

For example, to search citations to items that are not indexed in the Web of Science Core Collection

Cited Patent Search

The Cited Reference in Web of Science can be used to search for Cited Patents too.

To do a Cited Reference Search for patents, enter the patent number in the Cited Title field. Do not specify a country code. For example, enter “5015744” to look up references to patent US5015744. This search will retrieve results for citations to patents from source items indexed in the database.

TIP – Search the patent numbers of a patent family with the operator OR to find the citations to an invention

About Web of Science™
The Web of Science is the information and technology provider for the global scientific research community. We provide data, analytics and insights, as well as workflow tools and bespoke professional services to researchers and the entire research community that underpins research – universities and research institutions, national and local governments, private and public research funding organizations, publishers and research-intensive corporations, across the world.

You are here: Web of Science Collections > [Web of Science Core Collection](#) > Open Access

Open Access

Open access status is provided across the Web of Science platform as a result of a partnership with [OurResearch](#), a not-for-profit organization that recently launched a knowledge base of Open Access (OA) content. This knowledge base makes it possible to discover and link to legal Gold or Bronze (free content at a publisher's website) and Green (e.g., author self-archived in a repository) OA versions. This partnership improves discoverability and access to article-level OA versions not only by adding more links to OA content, but also by prioritizing the links to the best version of OA content when multiple versions of an article are available. You can learn more about OA on the [Clarivate website](#).
